

Ply-Krete[®] Mixing Station

The **Ply-Krete[®] Mixing Station** is a simple tool that holds the pails to help keep it from spinning during the mixing process. Polyset offers these units as a convenience item for our customers. The Ply-Krete[®] Mixing Station securely holds almost any tapered pails (3-1/2, 4, 5, or 6 gallon size) used for mixing Ply-Krete[®] and other elastomeric concretes, mortars, grouts, and many other thick materials. To use, stand on the attached foot placements then set the bucket into the Ply-Krete[®] Mixing Station. The taper-lock design will instantly grab the bucket and prevent it from spinning.

The bucket and Ply-Krete[®] Mixing Station may be carried as one unit to the point of pour-off. You can lay the bucket and mix station assembly down to allow the mixed material to flow out of the bucket. The foot placement pads will keep the bottom of the bucket elevated above the top allowing the material to flow out.

Leave the empty buckets in the Ply-Krete[®] Mixing Station for mix after mix. To remove the bucket, pull the handle upward and rock side to side.

The high impact injection molded plastic construction is durable and easily cleaned. Measures 18" wide x 18" long x 4" high. Weighs 1-3/4 lbs. \$35.00 each. Part number: 268900

Ply-Krete[®] Mixing Station

Ideal for Mixing and Handling Thick Materials
