

# Ply-Krete® & Ply-Seal® Joint Systems For Airports

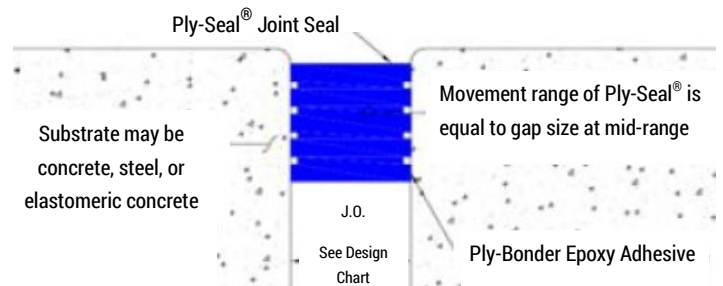

The **Ply-Seal® Joint System** consists of **Ply-Seal®**, a waterproof joint seal that bonds to most any substrate to provide a flexible waterproof joint seal.

The **Ply-Krete® Joint System** includes the **Ply-Seal®** and provides protection to the joint edges in abusive traffic areas that concrete cannot handle. **Ply-Krete®** is a fast setting, elastomeric concrete nosing material.

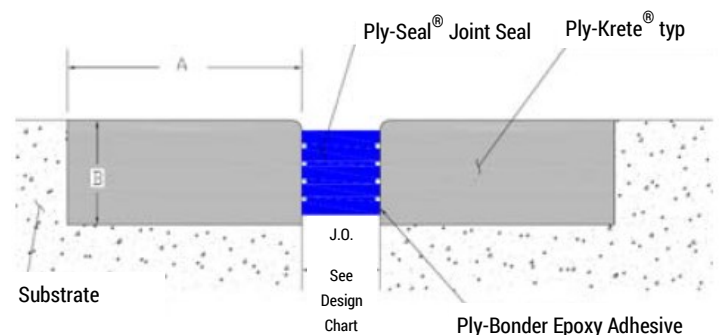

Both systems are easy to install with minimal downtime, making them a convenient joint system for platforms and airports.

### Applications

- Airport taxiways and tarmacs
- Rail platforms and loading stations
- Airport parking garages
- Commercial structures where a waterproof joint seal is required
